

CANALIX
CANADA LICK BLOCKS LTD.

Beef Cattle Lick Tub Supplements

- Molasses based, low moisture, cooked, supplements manufactured locally in Manitoba, Canada.
- Formulated with all-natural proteins (except the Pasture Plus 32% and Corn Grazer 30% as they contain urea. Only provide these products to ruminating cattle over 450lbs or 4-5 months of age).
- Expected rate of consumption is 100-250 grams/head/day for growing and mature cattle (except the Corn Grazer 30% and 18% Medicated With Bovatec).
- Provide 1 lick tub per 20-30 animals.
- Move lick tubs closer to or further away from water sources or loafing areas to help regulate intake on pasture.
- For large pastures, more than one tub location is recommended to ensure adequate intake.
- Must provide free-choice salt, good quality forages, and fresh, clean water at all times.
- Protein supplementation is critical when fed low protein diets to ensure rumen microbes have the precursors for microbial activity.
- Molasses sugars are a rapidly fermentable energy source for fibre digesting microbes in the rumen. This fuel promotes efficient fiber digestion, nutrient absorption, and overall feed intake.
- Do not provide beef cattle mineral programs to sheep.
- Available in 90.7kg (200lbs) lick tubs.
- Products for sheep and horses are also available.

Beef Cattle MAX 18% Breeder Chelated Lick Tub Supplement

- Formulated with higher levels of vitamins and trace minerals as well as chelated trace minerals.
- Improved trace mineral stability compared to inorganic counterparts. This prevents them from binding with antagonists (sulfur, iron, molybdenum) to ensure the animal can absorb the minerals provided for bodily functions.
- Excellent option for all classes of cattle year-round, including high performance cows during all stages of production, developing replacement heifers or yearling bulls, and stressed receiving calves.
- Available with or without garlic.

Beef Cattle Pasture Plus 32% Lick Tub Supplement

- Compliments diets with low protein, such as mature forages in late season grazing, or cattle with higher crude protein requirements, in particular growing or lactating cattle.
- Provide to cattle with a healthy, functioning rumen.

Beef Cattle Eco 7% Mineral and Salt Lick Tub Supplement

- Only Cana-Lix product formulated with salt.
- Economical for producers who do not require significant protein supplementation in addition to a complete mineral program.
- Can be fed to all classes of cattle.

Beef Cattle Corn Grazer 30% Lick Tub Supplement

- Designed for cattle grazing corn, corn or cereal stubble, or cattle that are consuming a very high corn silage diet with limited hay.
- Softer consistency to promote greater feed intake so cattle can consume adequate total calcium and protein when fed the above diets deficient in these nutrients.
- Expected rate of consumption is 200-450 grams/head/day.

Beef Cattle 18% Medicated With Bovatec Lick Tub Supplement

- Free choice supplement medicated with lasalocid sodium (Bovatec).
- For increased rate of weight gain in pasture cattle (stocker cattle, feeder cattle, and beef and dairy replacement heifers).
- Provide to weaned cattle on pasture, extended grazing, or hay diets until market weight is achieved.
- Target intake is 125 grams/head/day.
- Do not feed with other medications.
- Cannot be fed to horses or sheep.
